Seonmin Kim

Los Angeles, CA | kimsunmin0227@gmail.com | linkedin.com/in/sunnykimm12 | github.com/nimnusmik

EDUCATION

University of Southern California, Viterbi School of Engineering Expected May 2028
M.S. in Applied Data Science, Los Angeles, CA

Hankuk University of Foreign Studies, Yongin, South Korea Aug 2024
B.B.A., Global Business and Technology; Double Major, Artificial Intelligence Convergence
Valedictorian (1 of 200+ graduates) | GPA: 4.22 / 4.5

PROFESSIONAL EXPERIENCE

Global Vision Co., Ltd., Seoul, South Korea Jan 2026 - Jul 2026
Data Engineer, Data Platform and Business Intelligence | github.com/nimnusmik/onbid-auction-pipeline

- Built the company's first ETL pipeline: a 5-stage daily job loading listings from two government Open APIs into 18 SQLite tables with idempotent upsert loads, replacing manual searches.
- Added a data quality gate halting downstream stages on empty API responses, preventing production tables from being overwritten; pipeline running on schedule in production since Jan 2026.
- Mapped 118 district name pairs to 5-digit legal district codes, enabling joins between auction listings and real-transaction prices; materialized a daily snapshot table by region and asset type for reporting.

SEMO, Seoul, South Korea Sep 2025 - Dec 2025
Analytics Lead Intern

- Wrote the GA4 event spec and Measurement Protocol design for SemoLens (AI page audits) and verified the dev build.
- Built BigQuery SQL on the GA4 export (D7 cohort retention, payment conversion, time on page) feeding an executive Looker Studio dashboard; pinpointed payment as the top drop-off.
- Ran a hypothesis-experiment-fix loop across the beta hypotheses, turning findings into prioritized UX fixes as Jira tickets.

PROJECTS

GV_TM: Telemarketing Management System 2023 - 2026
Solo Developer | github.com/nimnusmik/gvms_TM

- Solo-built a telemarketing management monorepo (121 commits): Django/DRF + PostgreSQL backend (7 domain apps), Celery async Excel ingestion, automated settlement pricing, orchestrated with Docker Compose (6 services).
- Shipped a React admin dashboard and Expo mobile app on a versioned REST API with S3-backed recording storage.

TOSS ML NEXT CHALLENGE: Ad Click-Through Rate Prediction (Dacon) Sep 2025 - Oct 2025
Team Lead (3) | github.com/nimnusmik/toss-ad-click-prediction

- Placed top 10% of 700 teams (score 0.32 to 0.348); handled 10M+ rows with 1:52 class imbalance via 1:10 downsampling; implemented DCN-v3 feature crossing with a 128-dim LSTM click-history embedding.
- Built a chunked Polars preprocessing pipeline (cyclic time encodings, high-order interactions) behind one reproducible preprocess-train-inference entry point, tracked in W&B, with temperature scaling to calibrate click probabilities.

Movie Rating Prediction Service and MLOps Pipeline Jul 2025
Team Lead and Data Engineer (4), Kernel Academy AI Bootcamp | github.com/nimnusmik/mlops-project-mlops-5

- Built a Docker Compose MLOps stack: TMDB ingestion to PostgreSQL/S3, MLflow, FastAPI serving, Prometheus/Grafana; batched collection under a 1,000-call/day quota into a 2,900-event dataset (200+ movies, 300 users).
- Orchestrated ingestion, training, and deployment with Airflow DAGs across 3 AWS EC2 servers, with Prometheus, Grafana, and Loki alerting and least-privilege security groups.

RESEARCH EXPERIENCE

University of Seoul, Big Data and AI Economics Lab, Seoul, South Korea Jan 2024 - Jul 2024
Machine Learning Researcher

- Joined S-DoT sensor streams, building-registry attributes, and power usage into a 50,000-record dataset; raised R-squared from 0.38 to 0.73 with tuned XGBoost, identifying temperature and floor area as key demand drivers.

TRAINING AND AWARDS

AI Bootcamp with Upstage (Kernel Academy), May - Dec 2025 | Minister's Award, Ministry of SMEs and Startups, Republic of Korea (2023) | 2nd Place, HUFS DAT Capstone (2023) | Excellence Award, Data Youth Campus, KDATA (2022)

TECHNICAL SKILLS

Data Engineering: ETL/ELT pipeline design, dimensional and schema data modeling, incremental/idempotent loads, scheduling (Celery Beat, cron), REST API integration, pytest data quality testing
Databases and Warehousing: PostgreSQL, SQLite, MySQL, MariaDB, Redis, Snowflake, BigQuery
Languages: Python, SQL, R, Java, TypeScript
ML and Analytics: PyTorch, XGBoost, LightGBM, CatBoost, scikit-learn, Hugging Face, Pandas, Polars, NumPy, Matplotlib
Platforms and DevOps: Docker/Docker Compose, AWS S3, FastAPI, Django REST, MLflow, W&B, Prometheus, Grafana
